

EXAM: NUC. MED. HIDA SCAN w/CCK Imaging Department 330-596-7700 Scheduling 330-596-7187	 ALLIANCE COMMUNITY HOSPITAL <i>Experience Health Caring</i>
INDICATIONS:	If the patient has specific questions the patient should contact their physician. This test may be helpful in the evaluation of cholecystitis; inflammation of gallbladder (GB), cystic, or common bile ducts. Evaluation of hepatic transplant.
CONTRA-INDICATIONS:	Person has just eaten a meal within the last 8 hours. No morphine sulfate if allergic to morphine or has elevated amylase or other pancreatic enzymes indicating pancreatitis. A barium study cannot be done prior to this exam. If one is done, then 72 hours needs to pass before scheduling this exam. Patient who has recently (48 hours) had a technetium based nuclear scan performed. The table weight limit is 400-500lbs.
HOW LONG WILL IT TAKE?	Please arrive 15 minutes prior to your scheduled appointment for registration and insurance purposes. The exam will take approximately 3 hours to complete.
PREPARATION:	Patient should have had an ultrasound prior to this testing. Nothing to eat or drink for 8 hours prior to the exam. No narcotic pain medications for 6 hours prior to the exam.
PRECAUTIONS:	If you think you may be pregnant or if you are breastfeeding, make sure the doctor is aware and risks are explained. Mothers that are breastfeeding should consider pumping enough to be used for two days.
MEDICATION ISSUES:	No narcotic pain medication for 6 hours prior to the exam.
WHAT CAN BE EXPECTED:	<p>The patient will arrive at the hospital and enter at the main entrance.</p> <ul style="list-style-type: none"> - If the patient is not pre-registered, the patient will need to stop in the first office on the right, just pass the waterfalls, to complete the required paperwork. The patient should have a copy of the doctor's orders. - If the patient is pre-registered, the patient will go pass the waterfall, down the hall, pass the second circle on the floor, to the imaging comfort area. The patient will report in to register and review insurance. <p>The patient will be brought back to the department where we will confirm the patient's identity, explain the procedure, and review their history. An IV will be started. The patient will be placed on an imaging table and a gamma camera will be placed over top of their abdomen. An injection of Mebrofenin / Choletec (radioisotope) will be given in the IV. The patient will need to remain as still as possible for a little over an hour. Additional images may be required up to 4 hours. Once the first portion is done, CCK (hormone) will be administered through the IV for 30 minutes. Once again the patient will have to remain as still as possible. The study is completed after the images have been taken. At this time the patient will be allowed to leave. In some cases, the radiologist may want to inform the ordering physician on the status of the gallbladder to determine the next step for the patient before they leave. No precautions need to be taken other than limiting contact with children less than 3 years of age for the next 24 hours.</p> <p>NOTE. This material will be out of their systems within 48 hours. The material will not cause any side effects. A written report will be sent and usually takes 1-2 working days.</p>
